

Development and Innovation for Gattika

More than 10,000km away, we developed a TaylorMade solution for our client Gattika in Spain. An ERP whose objective was to streamline business management and digitize processes.

Gattika is a Spanish company dedicated to the organization and administration of shows, whose headquarters are located in the Canary Islands.

From the contact generated in 2019, work began on the management difficulties that the client expressed.

Work began on a project, which covered the design, development and implementation of a business management system (ERP).

This system made it possible to digitize a large part of its processes. Thus, involving their clients in a digital experience that facilitates procedures and follow-up.

“We were looking for a customized solution that could be adapted to the specific needs of the company in order to simplify and streamline tasks with the aim of improving productivity and unifying processes in a single tailored system.”

Patricia Vazquez (CEO GATTIKA)

Maximum **quality**

The work team dedicated to this project were part of 6 BOMBIERI collaborators, who used WEB technology to build a Cloud platform with PHP and PostgreSQL for remote administration.

This development has Tailormade characteristics, since it was created from scratch and made to measure. It is an ERP for a very particular artist management process. So it was possible to digitize the artist's experience to simplify the way of interacting with their clients.

A weekly follow-up was carried out, which allowed the product to evolve from delivery to delivery.

“Bombieri developed a customized software based on the initial needs of the company, with functionalities adapted to our requirements to achieve the objectives.”

100%
Digitization

Collaborators

Constant and **dynamic** communication
throughout the entire process

The work carried out was a challenge that demanded the completion of many changing requirements, with very varied regulations and business rules.

"We have achieved the technological adaptation that the company needed with the software developed by Bombieri and we have been able to end the accumulation of paper and spreadsheets. A more efficient and automated work has been achieved in the daily tasks of the company, offering our clients a more agile and effective service."

Multidisciplinary, agile and efficient are some of the characteristics that summarize a development that managed to meet the expectations of the client and the BOMBIERI work group in an international challenge.

+ 80%
Agility

- 75%
Paper

- 3 month
of Implementation

“BOMBIERI has a team of proactive professionals and the ability to understand and solve each of the difficulties that arose throughout development. They have adapted perfectly to our times and schedules transmitting proximity to 10,000 km of distance. Thanks to the entire Bombieri team for their work and involvement.”
