

ZPM Uruguay trusts Bombieri

We helped ZPM to build and maintain its logistic control system.

12

The number of successful projects managed with AmandA in the first year.

+1M

Transactions processed on AmandA.

ZPM is now using a powerful Logistics Control System developed by Bombieri to manage their projects efficiently.

In order to guarantee the quality standards to which ZPM has committed, and to ensure that they are maintained throughout the entire project, we provided the development of an exclusive software (ZPMS) that controls every step of the process from the factory to the work site, tracking each individual component with a serial number, together with all its details along each step, (images in case of damage, unloading arrangements for land or maritime transport, etc.), and working on line 24/7 / 365.

The platform was called AmandA.

This software allows ZPM customers to receive automated reports associated with events, should they occur, stock control in all stages, transport status for each component, etc., without having to use spreadsheets or paper records.

The data is collected by mobile devices with GPRS / WiFi connectivity in such a way that we can issue exchange receipts on the spot, at the same time that they are transmitted to the designated parties.

With this tool, a Logistics Manager can manage more than one project at a time without having to refer to multiple spreadsheets or daily activity reports. In addition, it makes billing and receipts management easy, among other things.

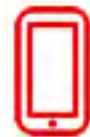

Offline operations

The mobile application makes it possible to record events and to collect all types of data in areas where there is poor signal or none at all, and to synchronize the data later.

Aggressive environments

Our solutions are designed to operate in aggressive environments where there is poor lighting, large amounts of dust, noise and all sorts of interference

Device capabilities

We will use all the devices capabilities to achieve your business goals successfully.

Custom solution

The solution to be implemented will be designed exclusively for your company, taking into account current and future needs.

Total integration

We create systems that seek to improve the recording and availability of information, integrating all the necessary tools to achieve it.

GPS tracking

With our systems you will be able to completely track your fleet, resources, instruments and components that are part of the operating process of your business.

Multimedia management

Agile management of all types of operations and recording by means of photography, video and audio together with a touch system, even in offline mode.

Field work

We create tools that allow you to move through the areas of operations with total freedom, always having the guaranteed to work.

“In ZPM we hired Bombieri’s services in order to develop and implement our new management tool, AmandA, employing Front-End, Back-End, API an APP for Android resources. We can vouch for their knowledge and expertise in several languages, their technical prowess, and the professionalism they showed throughout the project.”

Betty Arellano

Project Management - ZPM Uruguay

About ZPM

ZPM is a company dedicated to port operations and international logistics for over 30 years, has developed new working ways that established the current market standards in South American countries.

ZPM team is expert in port operations, road transport and logistics coordination in a wide array of markets (Uruguay, Argentina, Bolivia, Paraguay and Mexico).

ZPM is committed to the highest standards of performance, always seeking the most cost-effective way to achieve their customers' goals by being ahead of events, avoiding delays and minimizing incidental or unexpected inconveniences.
